

# Doctor Markdown

*A simple solution to all your document problems!*

Doctor markdown is a simple tool for creating and editing documents using the markdown format. It's great for making simple documents where you don't need to straggle with Word's formatting and aren't in need of LaTeX.

The simple two panel interface allows you to edit the document in real time and get instant feedback on the changes being made. The file is automatically stored in the running folder and can be copied and saved once your work is done.

Overall it's:

- Easy to use
- Fast to work with
- As simple as possible
- Open source
